Emergency preparedness at your fingertips

ARC® Facilities
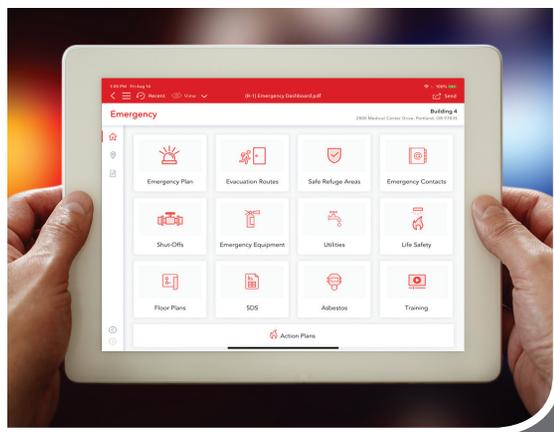

Key Benefits

- **Prepare effectively by implementing training facility-wide**
- **Respond collaboratively by improving coordination with first responders**
- **Recover quickly by regaining control and mitigating losses**

Save lives. Protect property. Aid recovery.

In an emergency, the person first responders want to see is the emergency manager -- whether the facility is a school, office building, hospital or factory.

First responders need crucial building information to do their job. Equipped with a mobile App rather than a flip chart—facility managers can provide information instantly, helping to save lives and protect property.

Additionally, emergency managers stand as the critical link between first responders and building occupants. As the emergency liaison, they must delegate authority and execute the action plan.

Execution of these tasks without previous preparation is difficult. Compound a lack of preparedness with the chaos of a disaster, and an emergency quickly turns into a catastrophe.

Recovery depends on access to critical information and quick action to avoid increased damage from a delayed response. And recovery is pivotal to the continued operation of the facility.

Even with so much riding on the emergency plan, most emergency managers are not properly equipped to prepare, respond and recover.

🔥 Action Plans

Access updated life safety information

- Emergency Contacts
- Fire System/Sprinklers
- Training
- Emergency Plans
- Safe Refuge Areas
- Emergency Maps

Building-level information for action plans

- Active Shooter
- Bomb Threat
- Fire Emergency
- Shelter-in-Place
- Natural Disaster

"The fact that we could access our emergency shut-offs in a time of emergency within a few clicks blew us away."

- Matt Baker, Facilities Supervisor
City of Wilsonville

$1 SPENT ON MITIGATION SAVES $4 IN COSTS LATER

- National Institute of Building Sciences
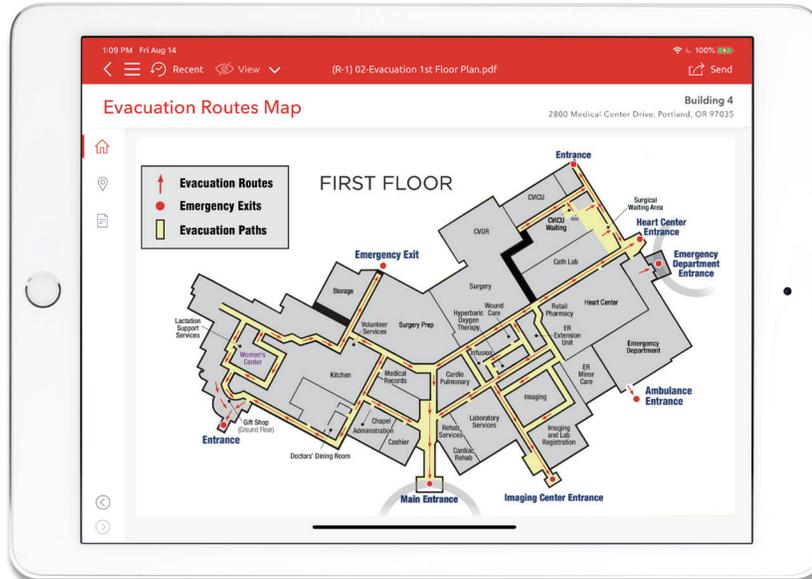

Floor plans & Emergency maps

Tap a button to drill down on the most current floor plans for every room in the building before, during and after renovations.

Mobile and offline access provides facility managers and their teams the information they need anytime, anywhere.

Easily share floor plans with incident area markups, evacuation plans and safe refuge areas with first responders.

Shut-offs

In the shut-off view, floor plans and building maps are clearly marked with specific locations.

Find shut-offs in seconds by locating them within a building map or floor plan. Then, a tap of the screen provides instant access to an image of the valve for easy identification.

The shut-off view makes it easy for the closest team member to mitigate damage and loss.

Collect and Organize

Our professional services team collects documentation by gathering digital files and scanning documents. Using Machine-Learning, Artificial Intelligence and extensive domain knowledge, the information is organized, linked and loaded into our platform.

Onsite Capture

Our Professional Services team arrives onsite to capture photographics of equipment and emergency shutoffs, apply QR code stickers, and record the locations of emergency equipment. We launch the solution with your staff and provide any training assistance that might be required.

Use, Share and Update

Your information is always available through a mobile app, allowing your team to complete more work orders, protect critical assets and improve customer service. And as your building changes over time and you complete renovations or modifications, we'll keep the app up-to-date for you.

ARC® Facilities

ARC Facilities has pioneered an entirely new category of facility management software: Building Plans and Information Management. Designed for mobility and quick access, our mobile-first platform puts your plan room in your pocket via an easy-to-use mobile app so on-the-go facilities teams can simply click on digital maps, retrieve closeout info, identify shut-off locations and equipment details anywhere, anytime.
